-----------	---------------------------

## **Summary**

Linux Systems Engineer with deep understanding of Fedora and Red Hat Enterprise Linux as well as Red Hat Network Satellite. Focus on deployment, maintenance and 2nd-/3rd-level support of Linux systems in large heterogeneous networks. Other regular tasks include the development of new infrastructure architecture and software packaging. Much interested in quality assurance.

## **Specialities**

Fedora, Red Hat Enterprise Linux, CentOS, RHN Satellite, Server Architecture, Free & Open Source Software and Communities, Bleeding Edge Technology, RPM Software Packaging, Software and System Test Engineering

## **Activities**

Long time contributor to the Fedora Project in a wide range of roles. Organizer of several free & open source software events in Switzerland. Staff with Switzerland's most famous and biggest convention on Japanese culture. Member of and former candidate for the cantonal parliament with the Pirate Party Switzerland.

## **Strengths**

Enthusiastic with Linux and free & open source software related jobs and tasks, most particularly when working with bleeding edge technology. Capable to work either in a team or autonomous, as required. Willing to continue learning and ability to learn new things quickly. Good at making well-considered decisions. Extensive leadership skills including task delegation.

## **Interests**

Linux, Fedora, Free & Open Source Software, Digital Sustainability, Bleeding Edge Technology, Professional Training, International Travel, Foreign Cultures, Digital Photography, Cooking
